

# PRESENTATION TIPS AND TRICKS

/things I learned the hard way

# KEEP IT SIMPLE

Repetition isn't the enemy

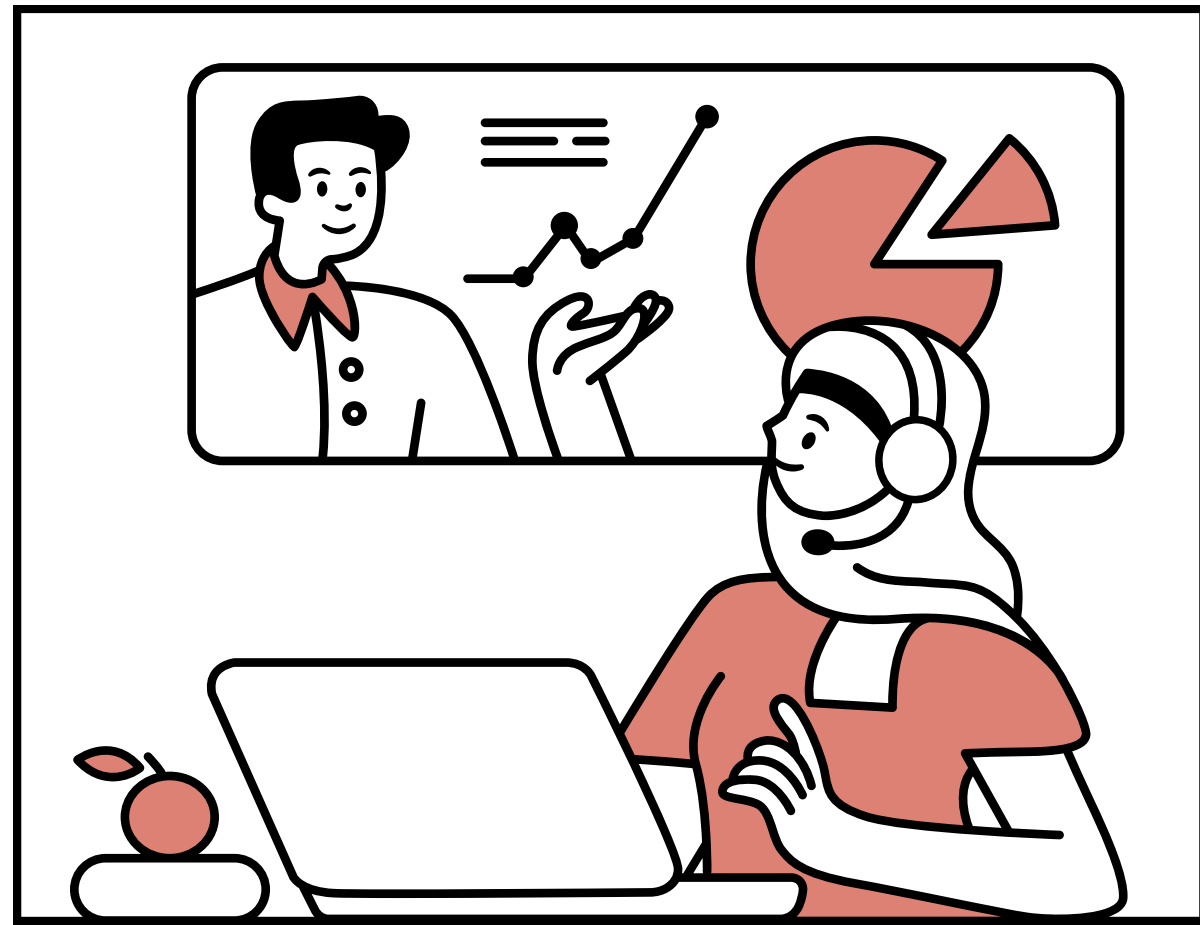

Keep in mind that people's attention won't be continuous/they might get distracted

One plot/ one equation at a time if possible

Focus on a small number of main conclusions

# AUDIENCE FIRST

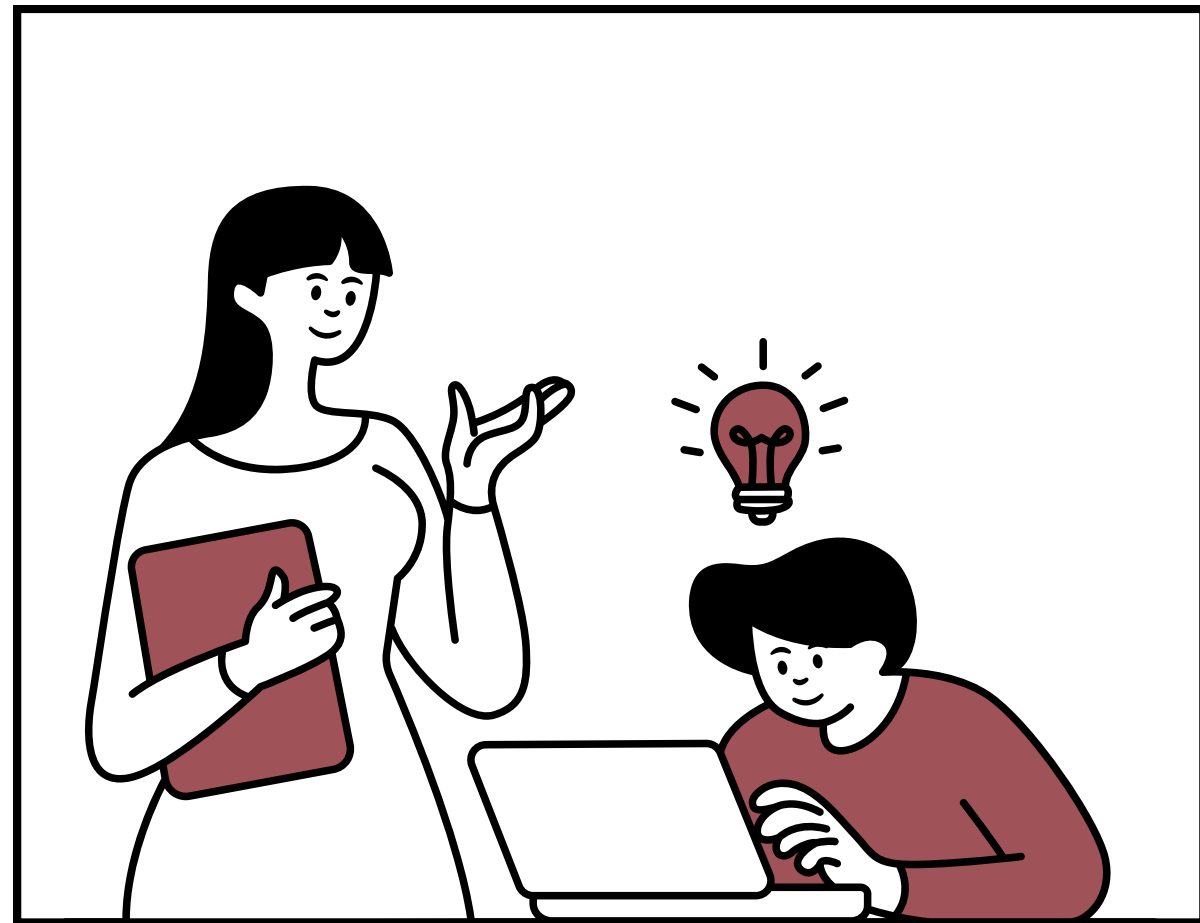

Keep track of the big picture **(WHY)**  
- **the introduction is so important**

Try not to get lost in the detail -  
even if the detail is where you  
spent most of your time

Tailor it as best as you can to their  
interests

# SPEAK AT A STEADY PACE

English isn't everyone's first language

Prefer simple language over 'pretty'/'fancy' terminology

Avoid jargon/excessive acronyms

# OTHER

Say your name clearly

1 unique slide (or less) per minute

Hourglass it

Look at A&A abstract structure if stuck

Have fun (I know)
